Definition of terms:

Index: the index used in the positioning tables on this page is the index on page 1 of this factsheet.

Sector/Industry Exposure & Country Exposure: These tables include the effect of derivatives where they can be linked to the underlying issuing company, otherwise they are included in the "Other Index / Unclassified" category. Derivatives are included on an exposure basis, and, where necessary are delta-adjusted. Delta-adjusting expresses derivatives in terms of the equivalent number of shares that would be needed to generate the same return. Where derivatives take the fund's total exposure to equity / sector / country over 100%, this will be incorporated in the tables above. The sector/industry classification used (ie Global Industry Classification Standard or Industry Classification Benchmark) varies by fund.

Top Positions: those companies in which the largest percentages of the fund's total net assets are effectively invested. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear.
