## Investment Objective

The Fund aims to provide income and moderate capital growth over the medium to longer term by investing in global fixed income securities and global equities. The Fund will actively allocate to, and within, different asset classes and geographies based on their potential to generate income and capital growth within the portfolio. The main asset classes in which the Fund will invest include global investment grade bonds, global high yield bonds, emerging market bonds and global equities. The Fund may tactically invest up to 50% of its assets in global government bonds. It may also have an exposure of up to 30% of its assets to each of the following asset classes: infrastructure securities and real estate investment trusts (REITS). The Fund may also invest in UCITS and UCIs.

## Performance (%)

	1mth (cum)	3mth (cum)	6mth (cum)	YTD (cum)	1yr (ann)	3yr (ann)	5yr (ann)	Since Launch (ann)

Source: Fidelity, NAV-NAV basis, in the respective currencies, with dividends re-invested. Average annual compounded return for periods greater than 1 year, cumulative return for periods less than 1 year. Please refer to "Share Class Details & Codes" for the launch dates of the respective share classes.

## Asset Allocation (%)

Fixed Income	57.0
Equities	33.1
Infrastructure Assets	5.0
Loans/CLOs	2.6
REITs	0.8
CAT bonds	0.2
Others	0.9
Cash	0.3

## Country Allocation (%)

Emerging Markets (excl Asia)	8.5
North America	22.2
Europe ex UK	21.2
United Kingdom	10.7
Asia ex Japan	24.7
Japan	2.1
Others	10.7

Basis: domicile of the issuer

Asset allocation: The asset class breakdown displays the totals for investments (including derivatives) in each category. Where derivatives are held, their contribution to the total is included on an exposure basis - i.e. an amount equivalent to the value that would have been invested in a fund to produce an equivalent holding. Where derivatives are used they may cause fund totals to exceed 100% (although very minor differences could be attributable to rounding).

### Definition of Terms

The Top 10 Holdings table shows the largest individual investments. For equities, all investments, including derivatives, linked to a particular issuing company have been combined to form a total percentage holding for each company. Where a company is listed in two separate countries, each listing may be classified as a separate issuing company. Fixed income investments are listed by individual issue (and not by issuer) to reflect the characteristics of the individual bonds. All derivatives are included on an exposure basis. Cash investments are not shown in the table.

Annualised Volatility is a measure of how variable returns for a fund or comparative market index have been around their historical average. Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk.

Sharpe Ratio is a measure of a fund's risk adjusted performance taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate.

Yield to Maturity is the internal rate of return earned on a bond, assuming that the bond will be held until maturity and all coupon and principal payments will be made. It is an estimation of future return, as the rate at which coupon payments can be reinvested when received is unknown.

Duration is a measure of sensitivity of the fund value to changes in interest rates and includes all investments in the fund including derivatives. It takes into account that expected cash flows will fluctuate as interest rates change and affect a bond's price.

\*Gross estimated distribution yield

\*\*For each bond in the fund, Fidelity looks at the rating given by three rating agencies (S&P, Moody's and Fitch) and applies the worst of the two best ratings (commonly known as the Basel method). If any derivatives are being used to adjust the credit quality of the fund, these are reflected in the Average Credit Rating".

FIL Investment Management (Singapore) Limited [FIMSL] (Co. Reg. No.: 199006300E) is a responsible entity for the fund in Singapore. Prospectus of the fund is available from FIMSL or its distributors upon request. Potential investors should read the prospectus before investing. All views expressed and references to specific securities are included for illustration only, and should not be construed as an offer or recommendation. This document is for information only and does not have regard to the specific investment objectives, financial situation and particular needs of the person who may receive it. Potential investor should seek advice from a financial adviser before investing. If that potential investor chooses not to seek advice from a financial adviser, he should consider whether the fund is suitable for him. Past performance of the fund is not indicative of the future performance. Prices can go up and down. The value of the shares of the fund and the income accruing to them may fall or rise. Investors investing in a fund denominated in a non-local currency should be aware of exchange rate risk. The fund is not available to US citizens, residents or greencard holders.
