Index information

Market index: MSCI Golden Dragon (N)

Market index is for comparative purposes only. The same index is used in the positioning tables on this factsheet.

Index until 30 April 2001 was the Hang Seng Index, until 29 June 2007 was the MSCI Golden Dragon plus HSBC Index and until 30 June 2011 was the MSCI Golden Dragon Index. Thereafter, it was changed to MSCI Golden Dragon Index (Net). The reason for the change is that a net index calculates performance net of withholding taxes which is more comparable with the calculation of the performance of the fund (also net of withholding taxes).

Definition of terms:

Index: the index used in the positioning tables on this page is the index on page 1 of this factsheet.

Sector/Industry Exposure & Country Exposure: These tables include the effect of derivatives where they can be linked to the underlying issuing company, otherwise they are included in the "Other Index / Unclassified" category. Derivatives are included on an exposure basis, and, where necessary are delta-adjusted. Delta-adjusting expresses derivatives in terms of the equivalent number of shares that would be needed to generate the same return. Where derivatives take the fund's total exposure to equity / sector / country over 100%, this will be incorporated in the tables above. The sector/industry classification used (ie Global Industry Classification Standard or Industry Classification Benchmark) varies by fund.

Top Positions: those companies in which the largest percentages of the fund's total net assets are effectively invested. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear.
