| Active Money (%) | 35.7 | - |

Index

Market Index: FTSE Straits Times All Share Index Capped Custom Index is for comparative purpose only. The same index is used in the positioning tables on this factsheet.

The Index was changed from the FTSE Singapore Index to the Singapore All Equities Index in July 2007. Thereafter, the Index was changed to FTSE ST ALL SHARE Custom Index* in January 2008.

*With effect from January 2008, the underlying stocks in the custom index are re-weighted by Fidelity.

Definition of Terms

Annualised Volatility is a measure of how variable returns for a fund or comparative market index have been around their historical average. Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk.

Beta is a measure of a fund's sensitivity to market movement (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

Sharpe Ratio is a measure of a fund's risk adjusted performance taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate.

Active Money is the sum of the fund's overweight positions (including effective cash) when compared to the market index.

A position combines all equity investments (including derivatives) linked to an issuing company. Derivatives are included on an exposure basis so they reflect the equivalent underlying shares needed to generate the same return. Geographic and sector breakdown tables are calculated using the positions methodology.

Share Class Details & Codes

| Share Class | Launch Date | NAV | Bloomberg Ticker | ISIN |
