

US High Yield Fund

Factsheet as of 30 November 2017

Investment Objective

The Fund seeks a high level of current income and capital appreciation by investing primarily in high-yielding, lower quality securities of issuers that have their principal business activities in the United States. The type of debt securities in which the Fund will primarily invest will be subject to high risk, will not be required to meet a minimum rating standard and may not be rated for creditworthiness by any internationally recognised rating agency.

US High Yield Fund

Factsheet as of 30 November 2017

This factsheet contains information about the composition of the fund at a particular point in time. It aims to help you understand how the manager has positioned the fund to meet its objectives. Each table shows a different breakdown of the fund's investments. The index used in the positioning tables is the index defined on page 1 of this factsheet. Where data is presented as a percentage of TNA, this stands for Total Net Assets (the value of all the fund's assets after the deduction of any liabilities).

Portfolio characteristics

	Fund	Index	Relative
Yield to Maturity (%)	5.8	6.2	-0.4
Running Yield (%)	5.9	6.3	-0.4
Effective Duration	3.0	3.6	-0.6

Yield to Maturity (%)

The Yield to Maturity (also known as the redemption yield) is the internal rate of return earned on a bond, assuming that the bond will be held until maturity and all coupon and principal payments will be made. It is an estimation of future return, as the rate at which coupon payments can be reinvested when received is unknown. The portfolio's redemption yield is the value weighted sum of the redemption yield of each individual instrument. The redemption yield is gross of the fund's charges and gross of tax.

Running Yield (%)

Describes the income investors get from their portfolio as a percentage of market value of the securities. It should not be relied on as a measure of expected fund return (or distribution). Bonds with high probability of default are excluded from the calculation. The running yield does not reflect the total return over the life of the bond and takes no account of reinvestment risk (the uncertainty about the rate at which future cash flows can be reinvested) or the fact that bonds usually mature at par value, which can be an important component of a bond's return. The running yield does not include the impact of fees.

Effective Duration

Effective Duration is a measure of sensitivity of the fund value to changes in interest rates. It takes into account all investments in the fund, including derivatives.

Exposure as a percentage of TNA (excluding derivatives).

For each bond in the fund, Fidelity looks at the rating given by three rating agencies (S&P, Moody's and Fitch) and applies the worst of the two best ratings (commonly known as the Basel method). The AAA/Aaa rating is the highest and indicates the borrower has the lowest probability of defaulting on its debt. The table above is a categorisation of the fund's individual bonds into their credit ratings. If any derivatives are being used to adjust the credit quality of the fund, these are reflected in the Average Credit Rating below.

Average Credit Rating

Average Credit Rating (Linear) (including derivatives) BB-

This is the weighted average of all the bond credit ratings in the fund, expressed using the industry standard letter system. It takes into account all investments in the fund, including derivatives. This measure gives an idea of how risky the fund's bonds are overall: the lower the average credit rating, the riskier the fund.
