Investment Objective

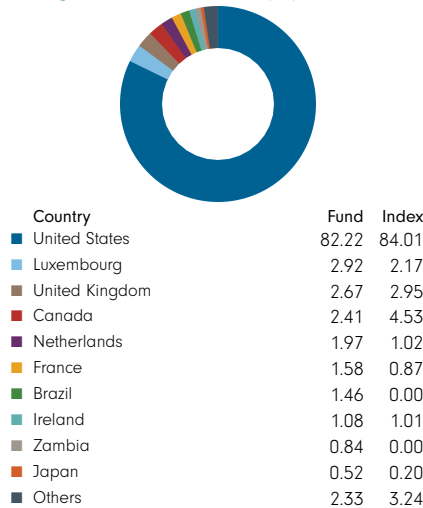

The Fund seeks a high level of current income and capital appreciation by investing primarily in high-yielding, lower quality securities of issuers that have their principal business activities in the United States. The type of debt securities in which the Fund will primarily invest will be subject to high risk, will not be required to meet a minimum rating standard and may not be rated for creditworthiness by any internationally recognised rating agency.

Definition of Terms

Annualised Volatility is a measure of how variable returns for a fund or comparative market index have been around their historical average. Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk.

Beta is a measure of a fund's sensitivity to market movement (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

Sharpe Ratio is a measure of a fund's risk adjusted performance taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate.

Yield to Maturity is the internal rate of return earned on a bond, assuming that the bond will be held until maturity and all coupon and principal payments will be made. It is an estimation of future return, as the rate at which coupon payments can be reinvested when received is unknown.

Running Yield describes the income investors get from their portfolio as a percentage of market value of the securities (incorporating the effect of derivatives) and does not include the impact of fees. It should not be relied on as a measure of expected fund return. The running yield does not reflect the total return over the life of the bond and takes no account of reinvestment risk or the fact that bonds usually mature at par value.

Duration is a measure of sensitivity of the fund value to changes in interest rates and includes all investments in the fund including derivatives. It takes into account that expected cash flows will fluctuate as interest rates change and affect a bond's price.

Average Credit Rating is the weighted average of all the bond credit ratings in the fund. It takes into account all investments in the fund including derivatives. This measure gives an idea of how risky the fund's bonds are overall: the lower the average credit rating, the riskier the fund. With a Linear weighted average the weight assigned to each issue is equal to its market value weight.

Exposure as a percentage of TNA (excluding derivatives). For each bond in the fund, Fidelity looks at the rating given by three rating agencies (S&P, Moody's and Fitch) and applies the worst of the two best ratings (commonly known as the Basel method). The AAA/Aaa rating is the highest and indicates the borrower has the lowest probability of defaulting on its debt. The table above is a categorisation of the fund's individual bonds into their credit ratings. If any derivatives are being used to adjust the credit quality of the fund, these are reflected in the Average Credit Rating under the "Measures" section.

Top issuers table: credit derivatives relating to any specific issuer are included, but derivatives relating to government bonds and to bond indices are excluded. Geographic exposure basis is domicile of issuer. The credit rating table excludes derivatives. Currency exposure is after hedging.

FIL Investment Management (Singapore) Limited [FIMSL] (Co. Reg. No.: 199006300E) is a responsible entity for the fund in Singapore. Prospectus of the fund is available from FIMSL or its distributors upon request. Potential investors should read the prospectus before investing. All views expressed and references to specific securities are included for illustration only, and should not be construed as an offer or recommendation. This document is for information only and does not have regard to the specific investment objectives, financial situation and particular needs of the person who may receive it. Potential investor should seek advice from a financial adviser before investing. If that potential investor chooses not to seek advice from a financial adviser, he should consider whether the fund is suitable for him. Past performance of the fund is not indicative of the future performance. Prices can go up and down. The value of the shares of the fund and the income accruing to them may fall or rise. Investors investing in a fund denominated in a non-local currency should be aware of exchange rate risk. The fund is not available to US citizens, residents or greencard holders.
