Investment Strategy	
<p>The Sub-Fund aims to track the performance of the EURO STOXX 50™ Index as far as this is reasonably and legally practicable. The fund manager's policy for achieving this objective is by the utilisation of replication methodology. The fund manager will aim to hold mainly all securities that represent the EURO STOXX 50™ Index. In order to achieve the investment objective, the fund manager will utilise stock index futures.</p> <p><u>With effect from 1 January 2018 or such later date as may be decided by the Board, the above will read as follows:</u></p> <p>The Sub-Fund aims to track the performance of the EURO STOXX 50® Index (before fees and expenses) thereby seeking to achieve long term capital growth.</p> <p>The Sub-Fund uses an 'index tracking' (also known as 'passive') investment management approach whereby it aims to replicate the composition of the index. However, for reasons such as liquidity or excessive cost, it may not always be practical for the Sub-Fund to invest in every company share in the index or at its weighting within the index.</p> <p>In order to manage the cash position, the Sub-Fund may invest in collective investment schemes (such as liquidity funds), including those managed by FIL Group, in addition to Money Market Instruments, cash and deposits.</p> <p>As well as investing directly in company shares, the Sub-Fund will also achieve exposure indirectly through the use of derivatives for efficient portfolio management purposes, for example, at the time of cash inflows to remain fully invested or to reduce transaction costs.</p>	<p>Refer to "Investment Policies and Objectives" section of the Luxembourg Prospectus for further information on the investment strategy.</p>

Liquidity Risks

You are exposed to Liquidity Risk

- In general the Sub-Fund manages its investments, including cash, such that it can meet its liabilities for the redemption of any Shares that investors wish to sell. Investments held may need to be sold if insufficient cash is available to finance such redemptions.
- If the size of the disposals is sufficiently large, or the market is illiquid, then there is a risk that either the investments might not be sold or the price at which they are sold may adversely affect the NAV of the Sub-Fund.

Product-Specific Risks

You are exposed to Equities Risk

- The value of stocks may fluctuate, sometimes dramatically, in response to the activities and results of individual companies or because of general market and economic conditions or other events.

You are exposed to Tracking Error Risk

- The Sub-Fund may be subject to tracking error risk, which is the risk that its performance may not track that of the index exactly. This tracking error may result from the investment strategy used, and fees and expenses. The Investment Manager will monitor and seek to manage such risk in minimising tracking error. There can be no assurance of exact or identical replication at any time of the performance of the index.

You are exposed to Passive Investment Risk

- The Sub-Fund is passively managed and the Investment Manager will not have the discretion to adapt to market changes due to the inherent investment nature of the Sub-Fund. Falls in the index are expected to result in corresponding falls in the value of the Sub-Fund.

You are exposed to Derivatives Risk

- The use of financial derivative instruments may give rise to leverage, liquidity, counterparty and valuations risks at times. In adverse situations, the Sub-Fund's use of derivative instruments may become ineffective and the Sub-Fund may suffer significant losses.
